## **Gordon helps in East Africa**

A DATA centre expert is helping raise funds to educate children in an impoverished rural district of East Africa – and is calling on support for his charity mission.

Gordon Liddle, at Corsham-based data centre operator MDS Technologies, is planning a trip to Kenya to help build a classroom and accommodation for teachers Sherston Musul Primary School.

The school serves a deprived Maasai community. The mission is the latest phase in an ongoing project administered by Wiltshire's Sherston Primary School, supported by private fund raising and donations from MDS Technologies.
